Work Aid One defines Abuse Child Death/ Near Death as:
1. Child Death:
Child death is defined as:
a) Any child death caused by abuse or neglect.
b) Any unexplained death of a child when the cause of death is unknown or pending an autopsy report.
c) Any child death caused by abuse or neglect resulting from the parent or legal custodian/caretaker failure to stop another persons direct action that resulted in the death of the child. Child deaths are always treated as severe abuse.
2. A near death, per Tennessee Code Annotated (TCA) 37-5-107(c)(4) is defined as a serious or critical medical condition resulting from abuse, neglect or child sexual abuse, as reported by a physician who has examined the child subsequent to the abuse or neglect. When an initial referral or a referral on an open case contains information that suggests the child is in a serious or critical medical condition as a result of the allegation(s) or has been determined to meet the criteria for an allegation of near death as defined above, the Child Abuse Hotline selects Preliminary Near Death (PND) Indicator in TFACTS on the participants tab on a new intake or the investigative persons tab on an active case. The information does not have to come from a physician. Preliminary near deaths are always treated as severe child abuse.
There is not a preponderance of evidence to support the allegation of Abuse Death. The allegation of Abuse Death will be classified and closed as Allegation Unsubstantiated, Perpetrator Unsubstantiated.
There is a preponderance of evidence to support the allegations of Drug Exposed Child, and those allegations will be classified and closed as Allegation Substantiated, Perpetrator Substantiated.

TL [redacted] staffed this case with Child Protective Services Case Manager (CM) [redacted] The previous AR was reviewed. Since the last meeting, it was reported by Ms. [redacted] that Mr. [redacted] is back into a relationship with his ex wife, and this bothers her because she is left to handle everything alone. Once it is approved, CM will prepare the case for final closure. Meanwhile, she will continue to monitor the family for safety and risk.

She stated that the funeral home did finally get the head stone placed on her daughters grave and it was even more beautiful than she thought it would be.
CM observed both boys to be clean and well dressed with no visible marks or bruises. Both boys were sleeping and observed moving in their own beds. [redacted] attempted to wake up, sat up looked around and laid back down.

Follow up AR: 3/12/24
TL [redacted] staffed this case with Child Protective Services Case Manager (CM) [redacted] The previous AR was reviewed. Since the last meeting, the mother has submitted to several drug screens that were only positive for her prescriptions, the grandmother has not been observed impaired, and there has been no sign of drug use in that home. She declined to agree to do hair follicle drug screens on the kids, and CM staffed with legal [redacted] who said there is not enough to file for compliance. TL staffed with TC [redacted] and Director [redacted] to redo the IPA for the mom to be unsupervised but stay with the grandmother. [redacted] post mortem hair follicle was positive for meth. The TBI reported to CM that the mom admitted to using the Sunday before the fire and said the dad was an everyday user and she has been trying to separate from him. The mom agreed to do hair follicles on the surviving children. The case was restaffed with TC [redacted] to go ahead and file a petition for the mom to go back to supervised contact due to the positive hair follicle until we can investigate further; however, legal [redacted] said even if we had filed at first and there was an order, the mom would be getting unsupervised now due to 3 clean drug screens and compliance, so we do not have cause to file for supervised contact for her. CM filed a petition for the dad to have no contact and for the mom to have controlled conduct tied to the grandmothers home so the kids will stay there at night. She will also have an A&D assessment. The mom is now on Buprenorphine and Lexpro for depression by her suboxone clinic doctor. The dad came to court and was positive for meth and amphetamine. He said had last used on 3/8/24. The court granted the no contact order but allowed him video phone calls. It was reported that [redacted] is getting them a trailer to live in.
CM will update case dictation and assessments per DCS policy. CM will assess for safety, risks, and needs to include permanency and well-being throughout the life of the case. CM will staff investigation as needed with TL [redacted] and prepare investigation for closure within 60 days (90 for FPP cases). This Administrative Review has been entered by TL [redacted] who has an Advanced Degree (Masters in Social Work).
