This case has been reviewed by TC [redacted] for closure. During the course of this investigation, safety was assessed, and the findings support a classification of Abuse Death unsubstantiated as the autopsy stated it was an accidental drowning. The Lack of Supervision was substantiated as both parents admitted to drinking and dad smoking a blunt during the drowning. Services were offered for grief counseling several times, but declined. Family seems to be okay at the present time. Children are safe in the care of their parents, and are not afraid. FAST shows safe and no risk. This Case is approved for closure at this time. Initial and closing notifications to the court and DA are compliant with local protocol.
